

# RMX<sup>®</sup> Operator

## Medium Duty Commercial Operator

Offers more value, convenience and ease of operation.

The RMX<sup>®</sup> is designed for hassle-free operation with convenient features and technical innovations that bring medium duty to a higher standard:

- **Limit setting** – enhances functionality, maximizes performance and easily establishes range of travel and stops by utilizing an optical limit system
- **Intermittent duty AC motor** – rated at 15 cycles per hour
- **Independent maximum run timers** – stops the close function if preset run time is exceeded, allowing for inspection
- **Control system** – on-board Open/Close/Stop buttons make set-up simple
- **No adjustments needed with SuperBelt<sup>®</sup>** – automatically adjusts itself to the correct tension
- **Delay on reverse** – this feature provides less wear and tear on the door system
- **16 character LCD display** – provides easy to read diagnostics, backlit for readability in low lit areas
- **Auto-reverse system (trolley models only)** – instructs the operator to reverse an operation and open a door to its limit if an obstruction is detected
- **Cycle counter** – built-in counter displays the total cycles logged over the operator's lifetime, to support warranty and service functions
- **UL325 2010 compliant** – this new standard requires the addition of a monitored external entrapment device prior to the operator working in momentary contact in the close direction

**WARNING**  
The operator must be mounted at least 8 feet (2.44 M) above the floor.  
Do not remove, cover or paint over this label.

### RMX<sup>®</sup> ADVANTAGES

16 character LCD display	UL325 2010 compliant
AC ½ horsepower motor	Available in single phase, 115 VAC and 230 VAC
SuperBelt <sup>®</sup> drive reduction	Direct coupling
Anti-corrosion protection	2 year or 20,000 cycle limited warranty on motor and parts

RMX<sup>®</sup> medium duty commercial operators provide the power to do more.
